

19-Feb-2011

Silberline at European Coatings Show, Nurnberg, Germany March 29-31, 2011

Silberline reached its 65th year of service to the global special effects market in 2010. After starting manufacturing aluminium pigments back in 1945, a great deal has changed in the world; however Silberline's commitment to quality and high levels of customer service have remained constant. At this year's EUROPEAN COATINGS SHOW, Silberline will again show its market leading aluminium pigment technologies and also many new wonderful products that add a new dimension to any formulator's palette.

- New "Liquid Metal" products that bridge the gap between conventional lenticular grades and Vacuum Metallised Pigments (VMP)
- The brightest SPARKLE SILVER ULTRA® grades now stable in water
- Anthracite metallic effect for dark, satin looks with SILPEARL™
- Gold without getting heavy; true gold and soft gold effects – single pigments with no heavy metals
- And something special for UV ink manufacturers...

**Come and see us at booth hall 7, stand 425 at the
Exhibition Centre, Nurnberg, Germany
to learn about our exciting new products!**
